

ISSCR Annual Meeting Poster Tips

To provide the best experience, review this document to prepare your poster for the ISSCR Annual Meeting. We encourage our presenters to share unpublished material. The ISSCR strictly prohibits the recording (photography, screen capture, audio, or video), copying or downloading of scientific results from the sessions, presentations, and posters at any ISSCR meeting. View our meeting policies [here](#).

Create your Poster:

Use these instructions and guidelines for designing a poster that visually presents your research or clinical project. Structure your poster similarly to a research paper or journal article. **Physical Posters are REQUIRED for in-person poster presenters.** *There are no virtual posters.*

- Brief sections: introduction (rationale or review of relevant research), methods, results, conclusion/summary, and key references list
- Use images, charts, diagrams, etc., with limited text to attract attention.

Poster Measurements: Please start to prepare your poster:

- Posters must fit in a one (1) meter by one (1) meter space. Posters should not go over 1m in width, or they will not fit on the horizontal poster board in a landscape format.
 - Use 36-point type for section headings and 24-point type for text is recommended for easy reading.

Material will be provided on site to attach your posters to the board.

- Poster presenters are responsible for printing their own poster. The ISSCR will not have printing capabilities on-site. Additionally, the venue does not accept direct shipments.
- Due to fire regulations, no tables, chairs, or electrical hook-ups will be allowed near the posters.

You are responsible for removing your poster upon completion of your assigned take-down time. ISSCR will not be liable for the posters left on the poster boards.

Email abstracts@isscr.org for any questions.
