

## ISSCR Abstract Submission Agreement

In submitting an abstract for consideration for an ISSCR meeting, authors are responsible for ensuring that work described in the abstract is conducted in accordance with the following rules and policies. Failure to comply with these terms constitutes grounds for abstract rejection. All submitted abstracts are evaluated by the Program/Organizing Committee to ensure that they meet submission standards:

- Substantive results, whether experimental, calculated or theoretical, must be included.
- Clinical case studies will not be considered.
- Abstracts of commercial products must include experimentally derived, quantitative data.

On occasion, the Program/Organizing Committee may solicit additional information from submitters to ensure that the work reported in an abstract complies with the ISSCR Research Conduct Policy. Failure to reply satisfactorily to a request for additional information constitutes grounds for abstract rejection.

While abstracts are evaluated for scientific interest and are citable, the brevity of the presentation precludes rigorous peer review. Thus, abstract acceptance by the ISSCR should not be taken as endorsement of the validity or safety of research by the ISSCR.

### 1. ISSCR Research Conduct Policy

Submission of an abstract constitutes a formal agreement and statement by the authors that they have conducted the reported research in accordance with relevant institutional and national guidelines and regulations regarding experiments on human subjects, live vertebrates or higher invertebrates and the [ISSCR Guidelines for Stem Cell Research and Clinical Translation](#).

Abstracts reporting any experimental work that was not conducted in accordance with these guidelines will be rejected by the Program/Organizing Committee.

### 2. ISSCR Research Communication Policy

The ISSCR is committed to ensuring that the public presentation of stem cell research and its applications are done responsibly to avoid misrepresentation of the work and misleading of the public (see Recommendation 4.1, ISSCR Guidelines for Stem Cell Research and Clinical Trials). This is especially important for sensitive areas of research including chimeras, embryo models, and some brain organoid work. For example, the ISSCR advises against using the term “synthetic embryo” to describe stem cell-based embryo models. Such embryo models should also be described as integrated or non-

integrated to ensure precise communication. To ensure that the science presented at ISSCR meetings is accurately represented, we may ask authors to revise the language used in their titles, abstracts or presentations.

The Program/Organizing Committee may solicit additional information from submitters to further evaluate compliance with the above policies. Failure to reply satisfactorily to a request for additional information constitutes grounds for abstract rejection.

3. **Not Published Elsewhere**

Abstracts must be based on results that have not been published in their entirety or have been recently published (6 months or less) in any journal nationally or internationally, before submission to ISSCR.

4. **Identical Policy**

Presentation material presented at the meeting must be substantively identical to that described in the abstract. In particular, the title, authorship, and scientific content of the presentation at the meeting must match that in the abstract.

5. **Presentation Limits**

An individual may appear as the presenting author on only one accepted oral abstract. No presentation may be given by an individual who is not an author on the abstract. An individual may present a maximum of one oral and three poster presentations during the meeting.

6. **Author Consent**

Authors may not be listed on an abstract unless they have given their consent to the submitting author. All material must be the work of the authors listed.

7. **Full Disclosure of Information**

Transparency is vital for the open sharing of information. The ISSCR requires full disclosure of the identities of genes, proteins, chemicals, active agents etc. in all presentations, both oral and poster.

8. **Presentation Agreement Remuneration**

Abstract submission implies an understanding that the authors will receive no remuneration from the ISSCR for their participation other than that specified in writing by the society.

9. **Permission for Use of Name and Likeness**

Authors give the ISSCR, its agents and representatives the right to use their names and likeness in promotional and other material published in relation to the meeting.

## 10. **Permission for Publication of Material**

Authors grant the ISSCR one-time copyright for publication of material they may provide for inclusion in the proceedings for the conference. The copyright consists of any and all rights allowed by the copyright laws of the United States and all foreign countries. Authors understand that the

proceedings, including their contribution, will be made available in printed and/or electronic form to the attendees of the conference, members of the ISSCR, and other interested parties pursuant to policies established by the ISSCR Board. Authors understand that the ISSCR will hold the copyright for the proceedings and its contents. Authors understand that the copyright of the compilation of materials in the proceedings is not the same as the copyright of an individual item of material included in the proceedings. Authors understand that they are encouraged to include copyright notices as appropriate on all the materials submitted to the ISSCR for publication. Authors understand that the ISSCR takes no responsibility for registering a copyright and advises the author to take all appropriate steps to do so. Authors authorize the ISSCR to sell or otherwise distribute said proceedings to the membership and general public. In return, authors understand that the ISSCR grants the right to reprint their contribution in any publication. Authors affirm that their contribution contains no matter that is defamatory or is otherwise unlawful or invades individual privacy or infringes on any proprietary right or statutory copyright. Authors affirm that their contribution is original with them or that they have obtained permission at their own expense from the copyright holder for publication and will submit documentation, showing permission for use, to the ISSCR at the time of submission of the materials to be distributed.

## 11. **Indemnification Agreement**

Authors agree to indemnify and hold harmless the ISSCR, its agents and its representatives should the material presented or provided for publication be determined to defame, libel or slander an individual or organization, violate the confidentiality of any individual or organization, or infringe on another's copyright.

Submitting authors must agree to the above terms at time of submission.
